Water West is a Western Australian private-sector water utility that delivers local water schemes to new developments.

We partner with developers to enable fit-for-purpose wastewater recycling schemes for the long-term lifestyle and cost benefit of local communities.

Perth’s water supply challenge
Perth is facing a significant water supply challenge which will require continued and significant investment in water assets as Perth grows.

An untapped resource
Water West schemes can help reduce reliance on dwindling water sources, to the benefit of developers and consumers, at no additional cost to government.

Our water schemes make the most of every drop of water: inside and out. By recycling local wastewater, Water West enables greener open spaces, verdant backyards and lush verges, all without the need for water restrictions. Water West’s schemes will reduce WA’s reliance on expensive drinking water sources (such as desalination), all at a competitive cost and delivery timeframe for developers.

How does it work?
Our solutions add value by locally treating wastewater and generating fit-for-purpose recycled water for generous irrigation of public open space and sports fields and for more sustainable use within homes.

An example of a Water West scheme is pictured below:
Partnering with developers
We will partner with developers to design, build and operate water schemes that best meet the needs of new greenfield and infill developments in Perth.

Our approach is to use our tried and tested technology, which will ultimately deliver recycled water to thousands of residences and businesses across Australia.

As a private company, we are focussed on understanding and being flexible to the design and financial needs of our developer clients. With the significant capital backing and reputational focus of the Brookfield Group, Water West is positioned to service our clients and customers for the long term.

Enabling communities
Those communities who adopt a localised wastewater treatment and recycling scheme can reduce their drinking water consumption by up to half. Water West can provide recycled water at a lower cost to residents and drive savings estimated at 10 per cent on average household water bills.*

Water West’s localised water schemes can also deliver:
• Larger and greener open spaces in new developments
• Cost-effective water schemes which enable new developments beyond the front of existing water infrastructure
• Improved lot marketability and house values over the long term.

About Us
Water West is backed by two major shareholders, Brookfield Infrastructure and Azure Capital, providing us with strong industry experience and financial flexibility.

Brookfield is a leading global infrastructure investment manager with over $240 billion in assets under management.

Water West and Brookfield Infrastructure have management teams that have deep knowledge and experience of both the property development and water industries.
